

EIONET Data Collection 1km x 1km Raster

Panos Panagos, Marc Van Liedekerke
Institute for Environment and Sustainability
Joint Research Centre of the European Commission
E-mail: panos.panagos@jrc.ec.europa.eu

- Integrating large spatial datasets using data Models (PESERA, Organic Carbon, Compaction,)
- LUCAS : Land Use/Land Cover Area Frame Survey
- Collaboration with the Member States and especially with our Networks:
 - European Soil Bureau Network (ESBN)
 - EIONET

Soil erosion risk assessment map

Erosion risk in t/ha/yr

This map provides a complete picture of the erosion risk for the 27 member states. It is derived from the Pan European Soil Erosion Risk Assessment (PESERA) and the RUSLE (Revised Universal Soil Loss Equation) model for Finland and Sweden.

MAP INFORMATION
 Spatial coverage: 27 Member States of the European Union where data available.
 Pixel size: 1km
 Projection: ETRS89 Lambert Azimuthal Equal Area
 Input data - source
 Climatic data - MARS
 Soil data - European Soil Database
 Land Use - CORINE Land Cover 2000
 Topography - STRM 90m

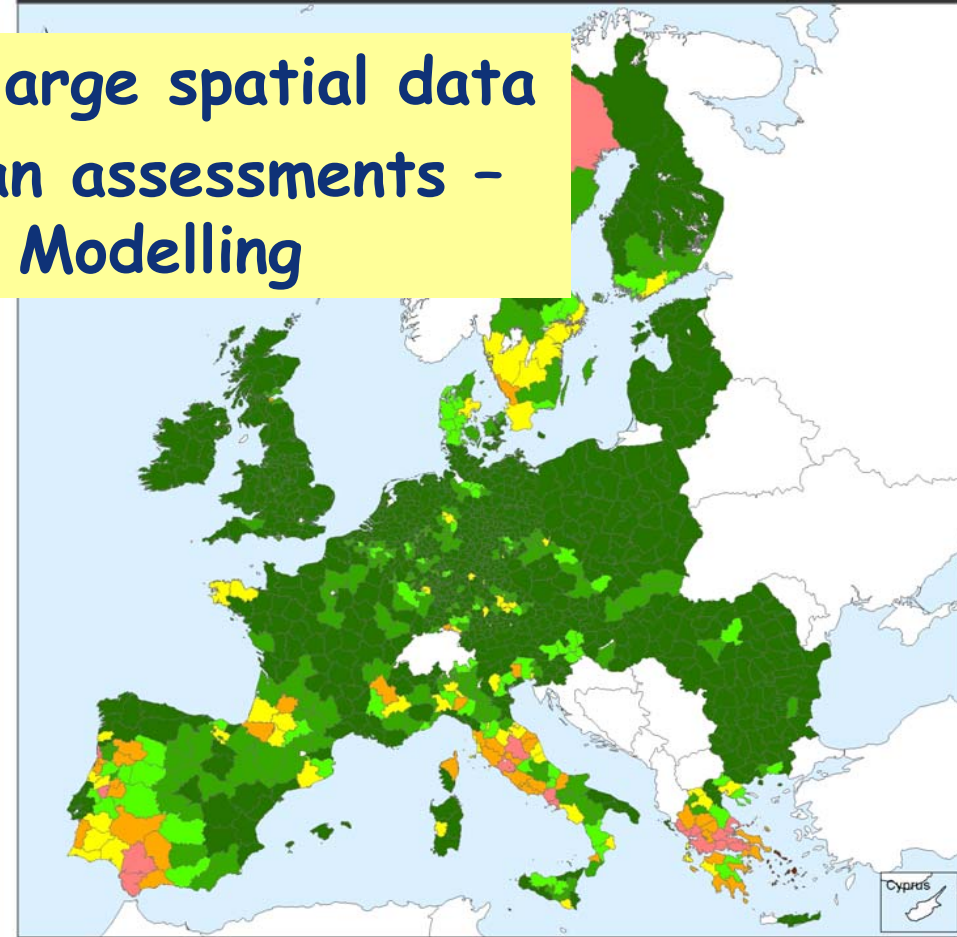

BIBLIOGRAPHIC INFORMATION
 Authors:
 RUSLE for Finland and Sweden: Ezio Rusco
 PESERA: Michael J. Kirkby et al.
 For more information:

Mean soil erosion risk for NUTS 3 level

Mean soil erosion risk in t/ha/yr

This map provides an overview of the erosion risk for the 27 member states on a NUTS 3 level. It is derived from the Pan European Soil Erosion Risk Assessment (PESERA) and the RUSLE (Revised Universal Soil Loss Equation) model for Finland and Sweden.

MAP INFORMATION
 Spatial coverage: 27 Member States of the European Union where data available.
 Pixel size: 1km
 Projection: ETRS89 Lambert Azimuthal Equal Area
 Input data - source
 Climatic data - MARS
 Soil data - European Soil Database
 Land Use - CORINE Land Cover 2000
 Topography - STRM 90m
 Territorial units: NUTS3

Integrating large spatial data for European assessments - Data Modelling

Model output

Organic carbon content (%) in the surface horizon (0-30 cm) of soils: total 71 GtC in EU

Aggregated results

National Soil Organic Carbon stocks (0-30cm) in Gt.

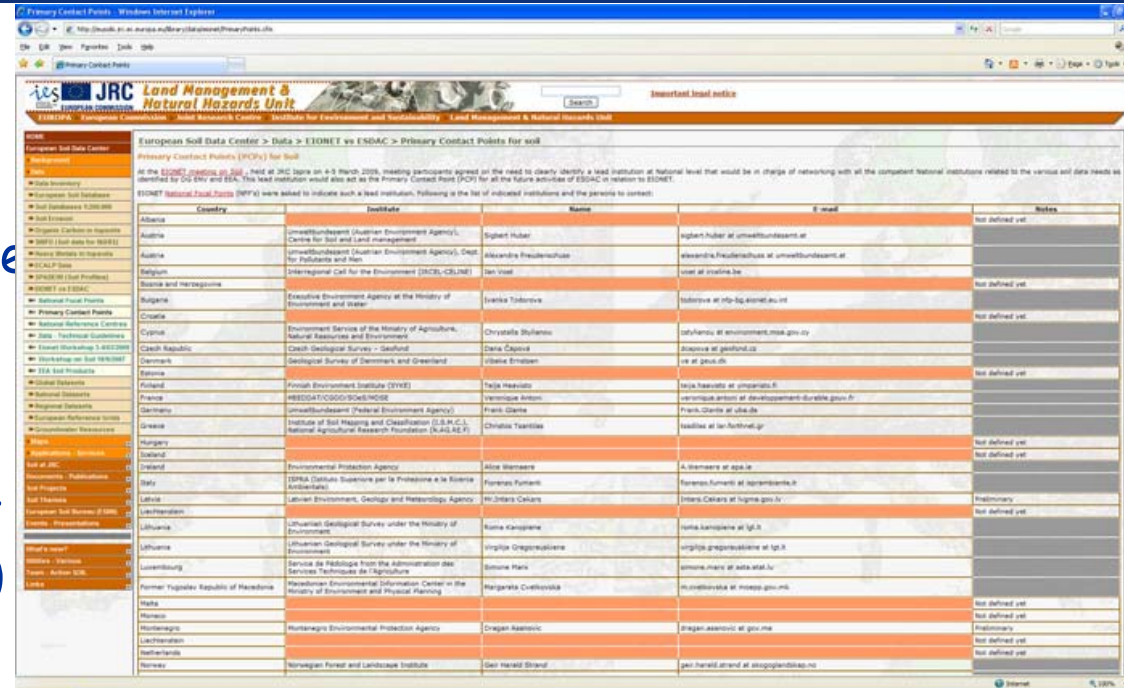

- Identify soil data requirements and reporting obligations
- Present the current and future implementation plan for the European Soil Data Centre
- Present the status and future requirements of the Infrastructure for Spatial Information in the European Community (INSPIRE).
- Present and discuss the views of EIONET members in relation to soil data reporting and INSPIRE
- Identify the way forward towards an operational European Soil Data Centre (beyond 2009)
- Identify the role of the National Reference Centers (NRCs), Primary Contact Points (PCPs), National Focal Points (NFPs) of EIONET in support of the ESDAC
- Establish a framework for the collaboration between EIONET members and ESDAC
- Define the roadmap and future deliverables in the framework of the collaboration between EIONET and ESDAC

Identify the Primary Contact Points

Land Management and Natural Hazards Unit

8

- Identify a **Lead Institution at National level** (in charge of networking with all the competent National institutions related to the various soil data needs as identified by DG ENV and EEA)
- The lead institution would also act as the **Primary Contact Point (PCP)** for all the future activities of ESDAC in relation to EIONET
- Information in the **European Soil Portal** in the section Data → EIONET vs ESDAC

Primary Contact Points (PCPs) for Soil

At the ESDAC meeting on 26 Feb., held at JRC Jrcs on 4-5 March 2010, meeting participants agreed on the need to clearly identify a lead institution at national level that would be in charge of networking with all the competent national institutions related to the various soil data needs as identified by DG ENV and EEA. This lead institution would also act as the Primary Contact Point (PCP) for all the future activities of ESDAC in relation to EIONET.

EIONET National Contact Points (NCPs) were asked to indicate such a lead institution, following is the list of indicated institutions and the persons to contact:

Country	Institute	Name	E-mail	Notes
Albania	Umweltbundesamt (Austrian Environment Agency), Centre for Soil and Land management	Elgert Huber	elgert.huber@umweltbundesamt.at	not defined yet
Austria	Umweltbundesamt (Austrian Environment Agency), Dept. for Publications and Rep.	Alexandra Frauenthal	alexandra.frauenthal@umweltbundesamt.at	not defined yet
Belgium	Interregional Cell for the Environment (ICRE-CLNE)	Jan Van	van@envie.be	not defined yet
Bosnia and Herzegovina	Executive Environment Agency at the Ministry of Environment and Water	Evanka Tolstova	tolstova@tep-bj.aronet.ba	not defined yet
Bulgaria	Executive Environment Agency at the Ministry of Environment and Water	Evanka Tolstova	tolstova@tep-bj.aronet.ba	not defined yet
Croatia	Environmental Service of the Ministry of Agriculture, Natural Resources and Environment	Christella Stefanou	stefanou@environment.mes.gov.cy	not defined yet
Cyprus	Geological Survey of Denmark and Greenland	Ulf Eriksson	eriksson@geofond.is	not defined yet
Czech Republic	Geological Survey of Denmark and Greenland	Ulf Eriksson	eriksson@geofond.is	not defined yet
Denmark	Geological Survey of Denmark and Greenland	Ulf Eriksson	eriksson@geofond.is	not defined yet
Finland	Geological Survey of Denmark and Greenland	Ulf Eriksson	eriksson@geofond.is	not defined yet
France	INRAE (Institut National de l'Environnement et de l'Agrochimie)	Christelle Stefanou	stefanou@environment.mes.gov.cy	not defined yet
Germany	Umweltbundesamt (Federal Environment Agency)	Frank Glantz	glantz@umweltbundesamt.de	not defined yet
Greece	Institute of Soil Working and Classification (I.S.W.C.), National Agricultural Research Foundation (N.A.R.F.)	Christos Tsanis	tsanis@in.forthnet.gr	not defined yet
Hungary	Environmental Protection Agency	Alice Stemann	A.Stemann@apple.hu	not defined yet
Ireland	EPRA (Eireannach Poblachtaire per le Phearsainn a le Roinn Aeris)	Frances Furness	frances.furness@epra.ie	not defined yet

- Two of the main **soil threats in European soils** are soil erosion and decline in soil organic matter.
- The EEA and the European Commission DG Environment have identified **soil erosion and decline in soil organic matter** as priorities in relation to the collection of policy relevant soil data at European scale.
- JRC organises through EIONET a **data collection exercise** with the objective of creating European-wide datasets for actual soil erosion and soil organic carbon (OC).
- An opportunity for the EIONET member countries to **participate in updating these maps**, considering that Member Countries frequently have more accurate and updated information

- **Technical guidelines** and grid files for the collection of soil OC and erosion data are distributed to EIONET members.
 - Data from EIONET member countries are collected according to a grid-based approach
 - 1km x 1km Grid Cells, Each cell carries a unique identifier , INSPIRE Compliant
 - Each country has assigned a number of grid-cells (covering the country territory)

- First phase: **Proposal for a technical guideline** for the EIONET data collection
 - Date: 22/7/2009 , Deadline for comments 30/9/2009
 - Review of the replies and Compilation of the Final Technical Guidelines

- Second phase (7/7/2010): **Data Collection**
 - Deadline 31/10/2010
 - Further Objective: Organise a Workshop at the beginning of 2011 based on the data collection exercise (Comparison with existing model outputs and the LUCAS results).

- Erosion: The (actual) soil water erosion are to be provided as **quantitative data** expressed in t/ha/yr
- If the data are the result of the use of models, details on the models used should be provided in the part on the **metadata**
- OC_30: soil organic carbon content (stock) for soil in the pixel (**t/ha**)
- OC_30_per: percentage of organic carbon content for soil in the pixel, 0-30 cm (%)
- OC (as stock and percentage) for the section 0-100cm
- **Metadata** for bulk density used to calculate OC stock as t/ha should be recorded together with information on sources and methods used to assess OC content.

- A total of **20 of 38 countries replied** (Austria, Belgium, Bulgaria, Czech Republic, Estonia, Finland, France, Germany, Greece, Ireland, Macedonia, Netherlands, Norway, Poland, Portugal, Serbia, Slovakia, Switzerland, Turkey and the United Kingdom).
 - **Sixteen countries** (AT, BG, CZ, DE, EE, FR, GR, IE, MK, NL, PL, PT, SE, SK, TR, UK) agree in general with the technicalities of the proposal and are ready to provide data, although many ask for clarifications or additional assessment.
 - **Four** (BE, CH, FI, NO) consider that the results may not make up for the workload

- The process of collaboration for data reporting between the ESDAC and the EIONET is developing in a **satisfactory way**. The ESDAC acknowledges both the **high number of replies** received and the **quality of the comments**. The suggestions have been considered

Country	Erosion	Organic Carbon
Austria	Only erosion risk	No data 0-100 cm
Belgium	May not deliver Field data at parcel scale in chosen sites?	May not deliver Field data at parcel scale in chosen sites?
Bulgaria	Risk of soil erosion calculated by a model based on USLE	Two sources: - Statistical monitoring network (407 sites) - Specific soil survey (0-25, 0-50 and 0-100 cm)
Czech Republic	No info	No info
Estonia	Difficulties (e.g. No data on rate of erosion)	Only in agricultural areas. Not in deeper horizons
Finland	May not deliver Study plots in agricultural land Routine measurements of sediment load in basins	May not deliver -Monitoring of 700 sites in agricultural land Cluster sampling in forest land Not in deeper soils
France	Current erosion risk by MESALES (Soil data 1:1.000.000)	Contact of an expert
Germany	Model at 50 x 50 m	Real data To be checked with national expert
Ireland	PESERA	National Soil Data Base Research project: Soil Organic Carbon
Greece	No info	No data for mountain areas

Country	Erosion	Organic Carbon
Former Yugoslav Republic of Macedonia	Data in m ³ / km ² / year	Scarce information for small areas
Netherlands	No info	No info
Norway	May not deliver Data available (most limiting data: soil type, at 1:1.000.000, except in some agricultural areas)	Only for cells where most of the soil is agricultural and soil is mapped
Poland	OK with model derived from USLE	OK for agricultural soils Forest soil data incomplete
Portugal	Not sure of delivering	Not sure of delivering
Serbia	Maybe not for the whole country	OK. No further info
Slovakia	OK, no info	Agricultural soils. Three sources of data: - Database from 1960s with 18.000 soil probes - Soil monitoring from 1993, 0-10 cm from 312 sites - Database of SOC stock (1970-2007) 0-20 cm at 10 x 10 km
Switzerland	May not deliver Data not available at nation-wide scale nor grid-based format There is map of soil erosion hazard potential (underlying soil map 1 : 200.000)	May not deliver Data not available at nation-wide scale nor grid-based format Data patchy and heterogeneous
Turkey	No info	No info
United Kingdom	No info	No info

- **Inconsistencies in the results:** Different outputs allowed by the different possible methodological approaches will lead to inconsistencies between countries (at boundaries) and/ or non-comparable data.
 - The ESDAC is fully aware of this fact. However, it is considered that by providing their data the countries are offering their current best estimate. This, even if not ideal, constitutes a good platform for future work.

- **Value for one cell:** What would be the value for one cell in case there is more than one measurement. The average? The median? .
 - It is up to the country to decide which value represents best the actual erosion and OC in a cell

- **1km x 1 km grid.** The 1 x 1 km grid might not be the better scale: it misses parcel data but is still too detailed (and entails a high workload)
 - The proposed 1 x 1 km grid is a resolution suitable for pan-European assessments; it is also one of the grids adopted by INSPIRE for the sake of reporting and display. Countries could upscale or downscale the data at national level in order to fit with the European grid

- **Practical improvements:** It was suggested to report the confidence intervals of the data and to add the time of data collection .
 - These elements should be included in the metadata

- **Missing data.** Many countries have data from a monitoring network of chosen sites. It is implicit that the up-scaling and extrapolation of this data has not been done.
 - ESDAC would like the countries to provide their available data in the proposed format. If, for any reason, it is not possible to bring the data in the requested format, ESDAC would appreciate if countries can send their erosion and OC data in the format they have available.

- **Assessment.** Some countries ask for help for calculating/extrapolating/modeling
 - ESDAC will try to help these countries on an individual basis as much as it can in guiding them to perform such calculations. It will be glad to share its knowledge and promote the exchange of information among the participants.
