Do we have a problem with soils?
Evidence of soil degradation in Europe
### General questions on soil

<table>
<thead>
<tr>
<th>Question</th>
<th>% of total</th>
<th>(% of total)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do you consider yourself well informed about the importance of soil and soil functions for human activities and the survival of ecosystems?</td>
<td>561 (46.5%)</td>
<td></td>
</tr>
<tr>
<td>I am confident I know sufficient</td>
<td>416 (34.5%)</td>
<td></td>
</tr>
<tr>
<td>I know the basics</td>
<td>229 (19%)</td>
<td></td>
</tr>
</tbody>
</table>

Almost all human activities are based on soil. In which of the following areas are you aware that soil plays a crucial role in: (Tick as many as applicable)

<table>
<thead>
<tr>
<th>Area</th>
<th>% of total</th>
<th>(% of total)</th>
</tr>
</thead>
<tbody>
<tr>
<td>maintaining good quality of surface water, groundwater and drinking water</td>
<td>1142 (94.7%)</td>
<td></td>
</tr>
<tr>
<td>hosting many organisms which are important for the ecosystems</td>
<td>1100 (91.2%)</td>
<td></td>
</tr>
<tr>
<td>providing agricultural products, timber and biomass</td>
<td>1095 (90.8%)</td>
<td></td>
</tr>
<tr>
<td>providing the basis of different landscapes (e.g. protected areas)</td>
<td>813 (67.4%)</td>
<td></td>
</tr>
<tr>
<td>preserving traces about past civilisations and geological eras</td>
<td>652 (54.1%)</td>
<td></td>
</tr>
<tr>
<td>providing minerals, clay, sand, aggregates, peat or other raw materials</td>
<td>638 (52.9%)</td>
<td></td>
</tr>
</tbody>
</table>

In your opinion, which of the following activities contributes most to soil degradation? (Tick a maximum of 5 options)

<table>
<thead>
<tr>
<th>Activity</th>
<th>% of total</th>
<th>(% of total)</th>
</tr>
</thead>
<tbody>
<tr>
<td>polluting industrial installations</td>
<td>847 (70.2%)</td>
<td></td>
</tr>
<tr>
<td>overuse of pesticides</td>
<td>757 (62.8%)</td>
<td></td>
</tr>
<tr>
<td>intensive arable farming</td>
<td>680 (56.4%)</td>
<td></td>
</tr>
<tr>
<td>urban sprawl</td>
<td>609 (50.5%)</td>
<td></td>
</tr>
<tr>
<td>illegal landfills</td>
<td>586 (48.6%)</td>
<td></td>
</tr>
<tr>
<td>clear felling</td>
<td>462 (38.3%)</td>
<td></td>
</tr>
<tr>
<td>poorly managed extractive industry</td>
<td>444 (36.8%)</td>
<td></td>
</tr>
<tr>
<td>intensive livestock production</td>
<td>415 (34.4%)</td>
<td></td>
</tr>
<tr>
<td>poor irrigation practices</td>
<td>357 (29.6%)</td>
<td></td>
</tr>
<tr>
<td>heavy machinery use</td>
<td>255 (21.1%)</td>
<td></td>
</tr>
<tr>
<td>excessive machinery use</td>
<td>160 (13.3%)</td>
<td></td>
</tr>
<tr>
<td>land abandonment</td>
<td>118 (9.8%)</td>
<td></td>
</tr>
<tr>
<td>I don't know</td>
<td>5 (0.4%)</td>
<td></td>
</tr>
</tbody>
</table>

### Soil Threats

Which of these threats affecting soil do you consider to be the most important in your country? (Tick a maximum of three threats)

<table>
<thead>
<tr>
<th>Threat</th>
<th>% of total</th>
<th>(% of total)</th>
</tr>
</thead>
<tbody>
<tr>
<td>contamination</td>
<td>766 (63.5%)</td>
<td></td>
</tr>
<tr>
<td>soil biodiversity loss</td>
<td>601 (49.8%)</td>
<td></td>
</tr>
<tr>
<td>sealing</td>
<td>561 (46.5%)</td>
<td></td>
</tr>
<tr>
<td>erosion</td>
<td>558 (46.3%)</td>
<td></td>
</tr>
<tr>
<td>organic matter decline</td>
<td>416 (34.5%)</td>
<td></td>
</tr>
<tr>
<td>compaction</td>
<td>158 (12.1%)</td>
<td></td>
</tr>
<tr>
<td>salinisation</td>
<td>135 (11.2%)</td>
<td></td>
</tr>
<tr>
<td>landslides</td>
<td>78 (6.5%)</td>
<td></td>
</tr>
<tr>
<td>I don't know</td>
<td>39 (3.2%)</td>
<td></td>
</tr>
</tbody>
</table>

Do you think it is important to know exactly where these threats are or might be occurring in the national territory?

<table>
<thead>
<tr>
<th>Importance</th>
<th>% of total</th>
<th>(% of total)</th>
</tr>
</thead>
<tbody>
<tr>
<td>very important</td>
<td>716 (59.4%)</td>
<td></td>
</tr>
<tr>
<td>important</td>
<td>404 (33.5%)</td>
<td></td>
</tr>
<tr>
<td>medium</td>
<td>68 (5.6%)</td>
<td></td>
</tr>
<tr>
<td>low</td>
<td>10 (0.8%)</td>
<td></td>
</tr>
<tr>
<td>I don't know</td>
<td>7 (0.6%)</td>
<td></td>
</tr>
</tbody>
</table>

### How would you rank the importance of preventing and mitigating soil degradation in the EU?

<table>
<thead>
<tr>
<th>Importance</th>
<th>% of total</th>
<th>(% of total)</th>
</tr>
</thead>
<tbody>
<tr>
<td>very important</td>
<td>818 (67.6%)</td>
<td></td>
</tr>
<tr>
<td>important</td>
<td>280 (23.2%)</td>
<td></td>
</tr>
<tr>
<td>important but less than other environmental problems</td>
<td>98 (8.1%)</td>
<td></td>
</tr>
<tr>
<td>not at all important</td>
<td>7 (0.6%)</td>
<td></td>
</tr>
<tr>
<td>I don't know</td>
<td>3 (0.2%)</td>
<td></td>
</tr>
</tbody>
</table>

Although soil type and characteristics are very variable across Europe, it is subject in many countries to the same problems. Soil is a static media, nevertheless, soil degradation has transboundary impacts. Against this background which of the following courses of action is the most appropriate?

<table>
<thead>
<tr>
<th>Course of action</th>
<th>% of total</th>
<th>(% of total)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a framework is developed at EU level and measures are established at national/local level</td>
<td>900 (74.6%)</td>
<td></td>
</tr>
<tr>
<td>all measures are established at EU level</td>
<td>198 (16.4%)</td>
<td></td>
</tr>
<tr>
<td>no action is taken at EU level</td>
<td>58 (4.8%)</td>
<td></td>
</tr>
<tr>
<td>I don't know</td>
<td>50 (4.1%)</td>
<td></td>
</tr>
</tbody>
</table>
EU Thematic Strategy for Soil Protection adopted by the European Commission on the 22nd of September 2006

http://ec.europa.eu/environment/soil/index.htm

http://ies.jrc.ec.europa.eu

http://eusoils.jrc.ec.europa.eu
The four pillars of the Soil Thematic Strategy:

1. Legislation
2. Integration into other policies
3. Research
4. Awareness raising
Soils deliver multiple services relevant to all of us:

1. Biomass production, including in agriculture and forestry;
2. Storing, filtering and transforming nutrients, substances and water;
3. Biodiversity pool, such as habitats, species and genes;
4. Physical and cultural environment for humans and human activities;
5. Source of raw materials;
6. Acting as carbon pool;
7. Archive of geological and archeological heritage.
Contamination of soils and ground water with applied agrochemicals and atmospheric pollutants

Changes in soil composition

Adverse impacts on living organisms in the soil

Blocking of soil functions important to the ecology of the landscape

Gradual disappearance of farms

Sealing

Destruction of soil

Gradual destruction of soils

Gradual destruction of humus

Reduction in soil fertility

Reduction in soil fertility

Distruption of humus

Acidification

Contamination of soils and ground water with applied agrochemicals and atmospheric pollutants

Changes in soil composition

Adverse impacts on living organisms in the soil

Release of toxic substances

Salinisation

Acidification

Acids

Pesticides & herbicides

Manures and fertilisers

Sewage sludge

Gravel extraction

Diffuse input of contaminants as particulates

Persistant substances

Soil erosion

Compaction

Destruction of humus

Changes in the structure of soils

Reduction in soil fertility

Destruction of soil

Gradual destruction of soils

Reduction in soil fertility

Soil degradation processes limit the soil functions
Organic carbon content (%) in the surface horizon (0-30 cm) of European soils.
Soil erosion by water in the EU 27 (t/ha/y) based on the RUSLE

Wind erosion susceptibility of the European soil based on the estimation of the wind-erodible fraction of soil (EF)
Landslides are a major threat in mountainous and hilly areas across Europe (land abandonment being an aggravating factor), often producing serious impacts on population, property and infrastructure. Over 630,000 landslides are currently registered in national databases.
Human Impact in Europe: Urbanization

- **EU-15**
  - Built-up area
  - Population

- Origin of urban land uptake as % of total uptake:
  - 48.4 % Arable land and permanent crops
  - 35.7 % Pastures and mixed farmland
  - 9.0 % Forests and transitional woodland shrub
  - 5.7 % Natural grassland, heathland, sclerophyllous vegetation
  - 0.4 % Open spaces with little or no vegetation
  - 0.3 % Wetlands
  - 0.5 % Water bodies
Soil sealing

Land take per administrative unit in the period 2000-2006

Soil sealed surface in 2006
Guidelines on best practice to limit, mitigate or compensate soil sealing

Resource Efficiency Roadmap, COM(2011) 571:

- **Milestone:** By 2020, EU policies take into account their direct and indirect impact on land use in the EU and globally, and the rate of land take is on track with an aim to achieve no net land take by 2050; soil erosion is reduced and the soil organic matter increased, with remedial work on contaminated sites well underway.
- **Communication on land use (2014)**
Proposal for a general Union Environment Action Programme to 2020: *Living well, within the limits of our planet*, COM(2011) 571

Priority objective 1: To protect, conserve and enhance the EU’s natural capital:

- (23) To reduce the most significant man-made pressures on land, soil and other ecosystems in Europe, action will be taken to ensure that decisions relating to land use at all relevant levels give proper consideration to environmental as well as social and economic impacts. The Rio+20 Summit outcome called for a 'land degradation neutral world'. The EU and Member States should reflect on how best to make such a commitment operational within their respective competencies as well as to address soil quality issues within a binding legal framework (COM(2006) 232). Targets will also be set for sustainable land use and soil.

- (26) In order to protect, conserve and enhance the EU’s natural capital, the programme shall ensure that by 2020: (e) Land is managed sustainably in the EU, soil is adequately protected and the remediation of contaminated sites is well underway.

  This requires, in particular: (e) Increasing efforts to reduce soil erosion and increase soil organic matter, to remediate contaminated sites and to enhance the integration of land use aspects into coordinated decision-making involving all relevant levels of government, supported by the adoption of targets on soil and on land as a resource, and land planning objectives.
SFD withdrawal & 7EAP

✧ **REFIT Communication, COM(2013) 685, 2.10.2013:**
The Commission notes that the proposal [for a Soil Framework Directive] has been pending for 8 years during which time no effective action has resulted. It will therefore examine carefully whether the objective of the proposal, to which the Commission remains committed, is best served by maintaining the proposal or by withdrawing it, thus opening the way for an alternative initiative in the next mandate. This will be judged on the feasibility of reaching adoption before the European Parliament elections.

✧ **Withdrawal Decision (corrigendum), OJ C 163, 28.5.2014:**
The Commission remains committed to the objective of the protection of soil and will examine options on how to best achieve this. Any further initiative in this respect will however have to be considered by the next college.

✧ **7EAP, Decision 1386/2013/EU, OJ L 354, 28.12.2013:**
25. (...) The Union and its Member States should also reflect as soon as possible on how soil quality issues could be addressed using a targeted and proportionate risk-based approach within a binding legal framework. Targets should also be set for sustainable land use and soil.
Milestone: By 2020, EU policies take into account their direct and indirect impact on land use in the EU and globally, and the rate of land take is on track with an aim to achieve no net land take by 2050; soil erosion is reduced and the soil organic matter increased, with remedial work on contaminated sites well underway.

The Commission will further develop the scientific knowledge-base on biotic material, land-use effects and trends, and spatial planning (…) leading to a Communication on land use (in 2014).

Communication on "Land as a resource":

- IA ongoing (two external contracts + JRC-EEA support)
- ISG established (first meeting on 19 May 2014)
- Land Conference on 19 June 2014
- Public consultation in the autumn or with new Commission
- Adoption by the Commission in the course of 2015
Outcome Rio+20:

A Zero Net Land Degradation World

- What does it mean?
- At what scale (local, National, Regional, Global)?
- Who should implement it?
- How can it be measured?
- When should it be achieved?

The Future we want!
Towards Zero Net Land Degradation

Land Restoration

Land Degradation

The Future we want!
Way forward: Horizon 2020

Establish a network of successful demonstration sites for soil/land restoration

(Galicia, NW Spain; Macias-Garcia et al. 2009)
Post 2015 negotiations

- Process launched in Rio+20: from MDGs to SDGs
- Open Working Group (OWG) meetings in New York in 2013-14
- Last meeting OWG13 in July 2014
- Report by co-chairs to UNSG in September 2014
- Report by UNSG to UNGA by December 2014
- SDGs to be adopted by world leaders in September 2015

Current version of the OWG "Zero Draft Rev 1" (30 June 2014):

- Proposed goal 15: **Protect and promote sustainable use of terrestrial ecosystems, halt desertification, land degradation and biodiversity loss**
- Proposed target 15.3: **By 2030, achieve a land degradation neutral world, and restore degraded land including land affected by desertification and drought**
- Proposed target 2.4: **By 2030 implement sustainable and resilient agricultural practices including for adaptation to climate change, extreme weather, drought and disasters, and progressively enhance soil quality**
- Proposed target 3.7: **By 2030 substantially reduce the number of deaths and illnesses from air (indoor and outdoor), water and soil pollution**
- Proposed target 11.3: **Enhance capacities for integrated and sustainable human settlement planning and management for all, and reduce urban sprawl**
The Road to 2015

March – Aug 2014: OWG shifts to recommending new goals, goals, indicators

Sept 2014: OWG submits report to UN GA

Sept 2014: UNSG synthesis report of all inputs to Post-2015 process

End of 2014: UNSG synthesis report of all inputs to Post-2015 process

Nov: ICN2

Sept 2015 Summit: Adoption of Post-2015 Development Agenda

Sept 2015 Summit: Adoption of Post-2015 Development Agenda

Sept 2015 Summit: Adoption of Post-2015 Development Agenda
The 68th UN General Assembly declared 2015 the International Year of Soils (IYS)
